I hereby authorize Refund Technology keep my signature on file and charge my credit card on an ongoing basis for amounts that I owe in accordance with the service I sign up for. I understand and agree that time is of the essence and this authorization is valid until terminated by written notice. I also agree to contact Refund Technology if there are any changes to my credit card account information. My sign up form and any changes I make to my service choice(s) are incorporated herein by reference.

Cardholder Name (Print or Type)

Signature

Date

For additional protection, we are required to enter your card's security code at the time a payment is submitted. For most cards, including Discover, Visa and Mastercard, the code is the last three digits printed on the signature strip on the back of the card. For American Express, the code is the four digits printed on the front of the card above the main card number.

Where can I find the Security Code?

Visa/Mastercard and Discover Users

Flip your card over and look at the signature box. You should see either the entire 16-digit credit card number or just the last four digits followed by a special 3-digit code. This 3-digit code is your Card Security Code.

American Express Credit Card Users

Look for the 4-digit code printed on the front of your card just above and to the right of your main credit card number. This 4-digit code is your Card Security Code.

What is the Security Code?

It is an important new Internet security feature that now appears on the back of most Visa/MasterCard and Discover cards, and on the front of American Express cards. This new code is a three or four-digit number that provides a cryptographic check of the information embossed on the card.

The security code helps validate that the person initiating an online payment actually has the credit card in his/her possession, and that the credit/debit card account is legitimate.

How does my Security Code protect me?

The security code is only printed on the card and it is not contained in the magnetic stripe information nor does it appear on sales receipts or billing statements - you must have the card in your possession in order to use this code.

Card Security Codes are not raised, so they are not scanned into standard credit card readers. In theory, these numbers are only visible to you. When you verify your Card Security Code with us, you assist us in verifying that you, the cardholder, are initiating the payment. This extra layer of security also helps to prevent errors.

Do I have to enter this Security Code?

If this code is printed on your card, YES, you must enter the code. Visa, MasterCard, Discover and American Express now require merchants to obtain the security code for all cards that have a code printed on them. In order for your payment to be accepted and processed, your code must be entered if it's printed on your card. This is done for your protection.
